## LE CHIFFRE 1 FRAC OPERATIONS COMPLETED

- **Fracture stimulation operations at Le Chiffre successfully completed**
- **Frac operations to commence at Klebb later this week**

Strike Energy Limited (ASX:STX) ("Strike") is pleased to advise that fracture stimulation operations at the Le Chiffre well have been successfully completed. The frac spread is currently being relocated to the Klebb well site where operations will commence later this week once the pumping units have been rigged up.

### LE CHIFFRE 1 - FRACTURE STIMULATION SUMMARY

Two stages were pumped as summarised in the table below. Both stages were pumped successfully and achieved our objective of placing a large volume of proppant in the fracture system.

Stage	Target seam	Depth to top of seam	Thickness	Fluid pumped	Proppant pumped
Stage 1	Patchawarra Vu Lower	1,955m	15m	1,400bbls	118,000lbs
Stage 2	Patchawarra Vu Upper	1,900m	35m	5,000bbls	460,288lbs

### FLOW BACK AND PRODUCTION TESTING

A coil tubing rig is currently milling out the inter stage plug and will then clean out any sand or other debris in the well before pumping nitrogen to initiate flow back of frac fluids.

# ASX Announcement

During flow testing our plan is to conservatively manage pressure drawdown to preserve reservoir integrity and provide data for subsequent production rate optimisation.

Yours faithfully

DAVID WRENCH  
Managing Director
